If you have other questions, please talk your doctor or pharmacist.

Hair cell – root; The serum is a special and real natural serum produced according to the norms of children, women and men.

During the use of this drug, when you go to the doctor or hospital, tell your doctor that you are using this Hair cell – root. Follow exactly what is written in this instruction.

Using a high or low dose other than the recommended dose for Hair cell – root may vary according to the skin structure..

IN THIS OPERATING INSTRUCTIONS

1. What is Hair cell – root and what is it used for?
2. Things to consider before using Hair cell – root
3. How to use Hair cell – root?
4. What are the possible side effects of Hair cell – root?
5. Hair cell – root storage

1.Hair cell – what is root and what is it used for?

- ◆ It regenerates hair follicles and makes weakened hair follicles strong and unbreakable.
- ◆ If the hair follicles are not dead, they renew the stem and cells.
- ◆ If there are eczema and clefts or open wounds on the scalp, it repairs and strengthens the scalp.
- ◆ It destroys germs and bacteria from the scalp.
- ◆ It ends the oiliness and bad smell on the scalp.
- ◆ It completely ends the dandruff and starts to repair the scalp and roots.
- ◆ Revitalizes the eyebrows and nourishes the passive stem cells; helps eyebrows grow back.

Can also be used for WOMEN, CHILDREN and MEN.

How does our hair grow?

Your hair grows about 1 cm on average every month. Hair grows out of hair follicles located under your skin.

A single strand of hair on the scalp grows continuously for 2-4 years (growth phase) and then stops growing for 2-4 months (resting phase).

Then the hair falls out. Instead, new healthy hair grows and the cycle repeats. Your hair is always in different phases of this cycle; Therefore, it is normal to lose hair every day.

What is male pattern hair loss?

Male pattern baldness is a common condition in men where the hair becomes weak and often the hairline recedes and/or the top of the head becomes bald. This is thought to be caused by a combination of genetic factors and a certain hormone

(DHT: dihydrotestosterone).

DHT causes shortening of the hair growth phase and weakening of the hair. This leads to male pattern hair loss.

These changes may begin to appear in some men in their 20s and become more common as they age. If the hair has been lost for a long time, the hair may be lost permanently.

If the hair root is completely inanimate, if the cells do not form weak hair or clear hair growth, Hair cell – root helps the stem cell to come to life.

What is female pattern hair loss?

Female pattern hair loss

Female pattern hair loss is generally seen throughout the scalp with thinning of the hair strands. In the course of all kinds of infectious diseases, especially parasitic and fungal infections affecting the scalp, regional or general hair loss may occur in the scalp.

Hair loss in women is a very common dermatological problem. This situation can be corrected with timely analyzes and appropriate treatments.

In a normal person, 85% of the hair is in the growth phase and 15% is in the resting phase. The hair in the resting phase naturally falls out after a while and replaces it with Hair cell – root.

What causes hair loss?

There can be many reasons for hair loss in women. These are anemia (iron deficiency anemia), strict diets that cause protein deficiency, intense stress, serious diseases, high fever and serious surgeries, drugs (blood thinners, chemotherapy and blood pressure drugs, (antidepressants), too much or less work of the thyroid gland, affecting metabolism many diseases.

Hair loss, which mostly occurs after stress, surgery, weight loss or a febrile illness, occurs 2-3 months later.

While many of the drugs cause a slight increase in shedding that occurs with a delay, the drugs used in the treatment of cancer cause very intense shedding shortly after starting the treatment.

Cancer treatment or the use of drugs used in the cancer treatment process does not prevent the use of Hair cell – root.

Hair cell – root use IN CANCER TREATMENT; It does not interact with drugs used in chemotherapy treatment.

What is child type hair loss?

Since hair loss caused by vitamin and mineral deficiencies is very common, hair loss is seen in children due to nutrition.

Especially zinc and iron deficiencies cause hair loss. It is very important to have a healthy and regular diet.

What are the Causes of Hair Loss in Children?

Hair loss in children is a problem that should be taken seriously. Hair loss problem, which is usually seen in children due to vitamin and iron deficiency, arises as a result of malnutrition and not getting enough sun.

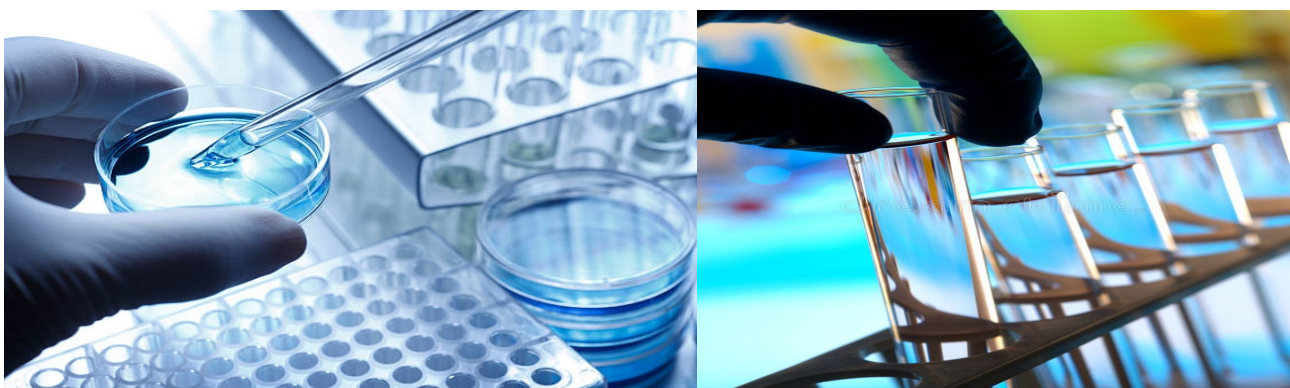

In addition, some other causes of hair loss can be listed as follows:

Use of soap and shampoo not suitable for children,

- Not enough feeding
- Alopecia Areata - Ringworm
- Hereditary features, -Sleeping in the same position all the time
- hair pulling disease
- Ringworm
- High fever
- Thyroid diseases.

Things to consider before using Hair cell – root

If you have an interaction or allergy from the vitamins and minerals in the hair cell – root, stop using it and consult your doctor.

3. How to use Hair cell – root?

Hair cell – root is in the form of liquid serum and its usage is very simple. It should be applied to your hair roots with bare hands.

2-3 minutes before applying to the hair root. Massage is a warning to your hair follicles. It is very important for your hair follicles to provide blood movement in the roots.

You need to apply the liquid serum to the Hair cell – root hair roots..

Never dry after applying.

Your hair follicles and cells will automatically absorb the serum.

Hair cell – root It is applied to all Hair Root surfaces in the morning and evening. Applying in the morning and evening accelerates the process of strengthening the hair follicles and nourishing the scalp.

Fungi (bacteria that occurs on the scalp) in your hair follicles and ringworm, which is known colloquially;

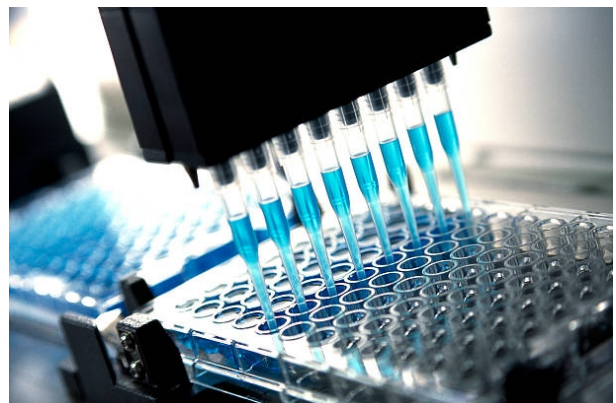

Ringworm (alopecia), which usually occurs in round hair loss, develops due to high stress, but it can also rarely occur due to chronic diseases or thyroid problems.

Ringworm can be seen in people who experience intense stress apart from the stress of daily life.

4.Hair cell – root what are the possible side effects?
